

mHealth for Clinical Trials Summit

June 12-14, Boston

An Open Letter From Spyros Papapetropoulos - Be A Change Agent

In our fast-paced, ever-changing world, technology is disrupting traditional clinical research models. As a clinical development professional and an early adopter of digital health, I have witnessed first-hand the transformational potential of mHealth in helping patients, their families, researchers, companies, governments and institutions, accelerate the delivery of new therapies and improve healthcare.

This wave of disruptions is not without challenges; scientific, behavioral, operational and regulatory mindset shifts are required to ensure successful implementation and large-scale adoption of mHealth in clinical trials, and eventually in healthcare.

Now is the perfect opportunity to immerse yourself in all that is new in mHealth for clinical trials. As chairman, I invite you to the 2nd Annual mHealth for Clinical Trials Summit to join a truly diverse group of professionals, from biopharmaceutical, technology and academic institutions. [Download the full event guide](#) for details.

Add your voice and be part of the clinical research mindset shift. From roundtables to presentation dialogs, to panel discussions and case studies, there is much to learn from each other!

For more information or to secure your place by visit website, or email register@hansonwade.com.

I hope to see you there.

Kind regards,

Spyros Papapetropoulos

VP & Global Head, Neurodegenerative Diseases, Movement Disorder & Clinical Trial Innovation

Teva Pharmaceuticals

Chairman – mHealth for Clinical Trials Summit
